

Technical Specification Sheet

Multi-Clad Maxi

with DT5, DT6 & Maxi

The modular design of the OKTOPUS® Multi-Clad makes it possible to use the single device, together with the optional 5 metre long (DT5) cross beam for installing roof panels of up to 14 metres.

Two single devices can also be attached using a 6 metre long cross beam (DT6) for installing longer roof panels of up to 17 metres or a fully extended 10 metre long cross beam (Maxi), enabling even longer roof panels of up to 22 metres to be installed safely.

All of the OKTOPUS® vacuum lifters come with two independent vacuum circuits (dual circuit) designed to lift twice the nominal load on its own. Unlike other machines, secondary safety straps are not necessary and are only recommended to prevent damage to the panel.

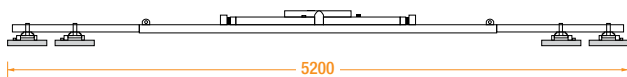

Technical Specifications

Typical application	Installation of sandwich panels in industrial, commercial and cold store construction		
The building panels to be processed	- must be non-porous on the lifting surface - have a clean surface - may not be covered by a protective film		
Maximum panel lengths	DT5	DT6	Maxi
Horizontal:	N/A	N/A	N/A
Vertical:	N/A	N/A	N/A
Roof:	up to 14 metres	up to 17 metres	up to 22 metres
Ceiling:	N/A	N/A	N/A
Safe working load	Up to 400kg depending on type and number of pads	600kg	600kg
Rotation	None	None	None
Tilt	None	None	None
Weight of device	Approx. 230kg	Approx. 320kg	Approx. 320kg
Control options	Local, optional cable or remote	Cable - optional remote	
Roof cross beam DT6 & DT10	Length 6m: 2 components (2 x 3m) Length 10m: 3 components (2 x 3m & 1 x 4m)		
Power supply	24V Rechargeable Battery		
Battery recharge time	4-6 Hours		
Battery life	10 Hours		
Vacuum production	2 diaphragm type vacuum pumps		
Vacuum pads	Round Cups (ø 250mm) Oval Pads (100 x 320mm)		
Optional accessories	- Chain suspension gear DT5, DT6 & Maxi - Secondary safety belts
